high-temperature terracotta tiles catalogue

todobarro.com

Sales conditions

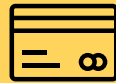

Production times

High temperature tiles take from 50 to 80 days to be manufactured. This period may be shortened or extended depending on weather conditions that facilitate or hinder the drying and firing process.

Dimensional tolerances

Our tiles, due to their handcrafted nature, may present slight variations in their actual measurements once produced. As a result of different drying times, the shrinkage of our pastes may be altered and vary the size of our tiles by up to ± 5 mm. In these cases, it will be necessary to compensate for these variations through the joint size at the time of installation. Likewise, combinations of formats with different finishes are more exposed to these variations in shrinkage and there is a possibility that the same format may present slight variations in size in different finishes.

Placing an order

Initial payment of 50% of the amount quoted, by transfer, and the remaining 50% once the order is delivered. 100% of the amount quoted must be paid when placing international orders.

Certifications

We have ISO 9001 certification, a standard that aims to improve customer confidence and satisfaction, establish a proactive culture of prevention, improvement, and environmental protection, and ensure the quality of products and services.

We are also CAAE certified as a sustainable material. A certification that accredits our commitment to the environment.

Review our FAQs

Click here to see the requirements and limitations of our products. Among others, we recommend to not use them in areas where it may frost or in salt water-chlorinated swimming pools.

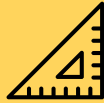

Services

Free quotation

We produce a quotation suited to the client's needs.
This is the most effective way to see the breakdown of costs for the material you are interested in.

Technical office

Our technical team can advise you on:
Project personalisation and planning.
Installation process.
Cleaning, protection and maintenance process.

Samples

Do you want to know better our finishes?
Ordering a sample set is the best way to appreciate the silky texture and the nuances of the colors that we manufacture. The price of sample orders accumulates as available credit for future orders.

tb.

high-temperature protection applied in the workshop

We have developed a **technology to make high-temperature tiles water- and oil-repellent during production**. This treatment waterproofs the surface of the tile immediately after it is crafted, allowing it to be used directly upon installation.

This innovation significantly simplifies working with our tiles. By using this technology, there is no need to apply traditional protection to the tiles after installation, **reducing the overall process by over 25 days!**

Technical features

Frost resistance

High-temperature terracotta is suitable for installation in outdoor areas exposed to frost. It is an ideal option for gardens and terraces subject to low temperatures during winter.

Performance in submerged areas

This finish is an excellent choice for decorating pool edges and basins. It also works well as a cladding for ponds, fountains, and similar water features.

Stain resistance

Its low porosity makes cleaning and protecting the tiles easier, ensuring that, with proper treatment, the pieces are less prone to surface stains.

What make us unique

At todobarro, we stand out in the creation of terracotta tiles with unique tones and textures, developing exclusive designs that modernize the aesthetic language of this traditional material.

We create neo-craftsmanship to personalize spaces to your specific needs. That's why we offer our exclusive lines of finishes:

- ◆ **Antique terracotta:** Handcrafted tiles with a unique aged and silky texture. They offer countless possibilities thanks to the compatibility of existing formats and the five available shades.
- ◆ **Antique glazed tiles:** Hand-glazed tiles that revive the finest pottery traditions of the Hispano-Arab artisans of Al-Andalus. The aged texture and chromatic nuances in each color evoke surfaces marked by the passage of time.
- ◆ **High-Temperature terracotta:** The latest addition to our catalog. A versatile handcrafted finish with superior performance. Available in ten earth-inspired colors and suitable for freezing exteriors and swimming pool basins.

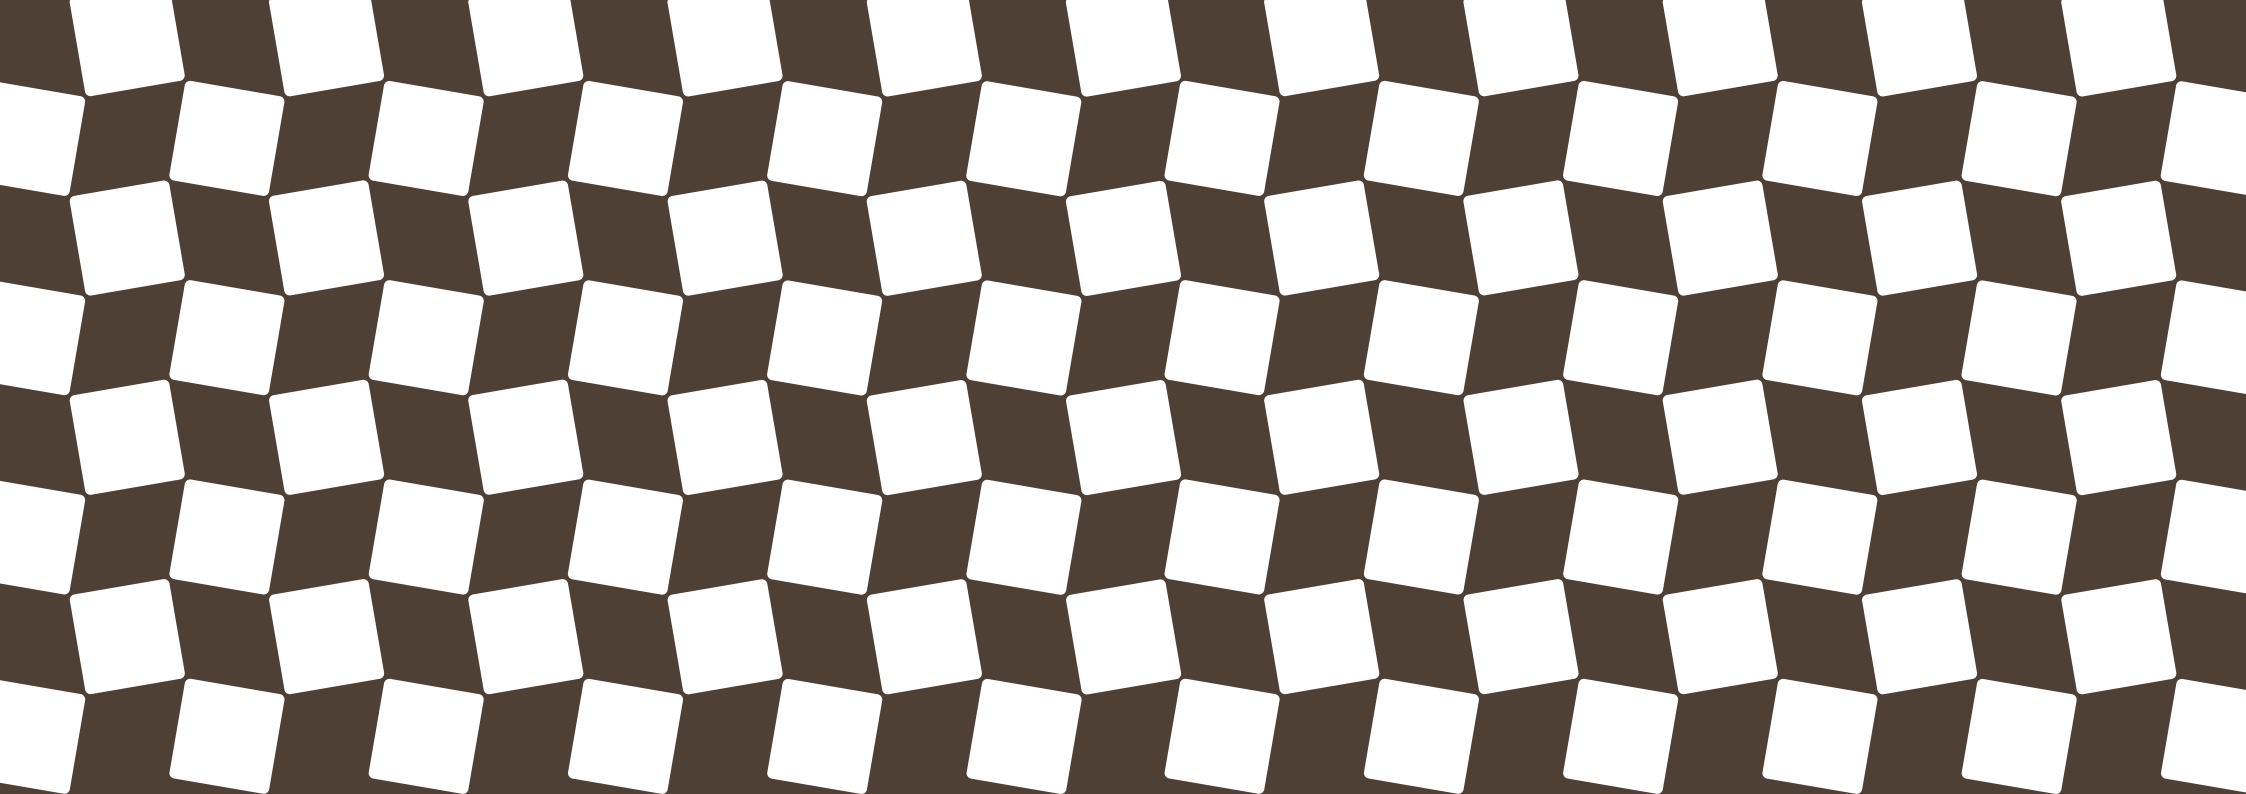

the todobarro team

At todobarro we are committed to our profession. We defend a model of a sustainable, environmentally-friendly company that cares for its employees, that preserves traditions by adapting them to our current times. This is why our team is

comprised of diverse professionals, who help us stay in constant evolution. Starting with our group of master artisans, all the way to our specialised technicians, the todobarro staff all share the love for their jobs and their outlook for the future.

General Index

high-temperature terracotta tiles

We craft our high-temperature terracotta tiles by hand and fire them at over 1400°C. This process achieves superior performance, offering several distinctive advantages:

frost resistance, suitability for submerged cladding, and reduced susceptibility to surface stains.

Available formats

Tierra collection

The Tierra collection celebrates the natural landscapes of Andalusia and, above all, its soil ("tierra" in Spanish).

Inspired by the diversity of our region's landscapes, we travel from Sierra Nevada to the Río Tinto to capture 10 characteristic colors.

Each color evokes an iconic location in Andalusia by reflecting the appearance of its terrain—a look shaped by the natural elements that define that particular soil.

We offer a wide range of earthy, evocative colors that adapt seamlessly to any project.

TIERRA COLLECTION

mulhacén

In the Sierra Nevada National Park, we find the highest peak in the Iberian Peninsula: Mulhacén. This peak lends its name to this off-white color, featuring subtle warm undertones.

gorafe

In the Granada high plateau, we find a small village called Gorafe, surrounded by a striking desert landscape known for its badlands. This area, known as "Los Coloraos," inspires this set of tiles with its salmon and ochre tones.

río tinto

In the province of Huelva lies the striking Río Tinto. Named for the reddish hue of its waters, caused by the presence of iron sulfides in the deposits and the river's source, this distinctive color leaves its mark on our Río Tinto tiles.

alquife

This earthy, reddish tone takes its name from Alquife, a town in Granada nestled within the largest open-pit iron mine in Europe. The finish's nuanced variations and tones replicate the dominant hues of this iron-rich land.
