The footprint of artisanship

Indoors, they separate while decorating, letting light and air pass through. Outdoors, they become a bioclimatic element capable of promoting cross-ventilation and regulating indoor temperature. At todobarro, however, we believe that breeze blocks can also take center stage, becoming the defining element of any type of space.

That is why our proposal brings together two aspects that rarely coincide:

- **A genuinely artisanal process.** Each piece is extruded, cut, and finished by hand using local clays. Its Antique finish—aged and silky—enhances the subtle variations resulting from this process.

- **A modular system.** Each model fits into a 12-centimeter grid that makes all the formats and accessories in this catalog compatible with each other. This gives rise to endless designs, which our specialized advisory team will help you adapt to your project.

The system can be enriched with two planter models and birdhouses. This is our commitment to creating living breeze blocks, beneficial both for people and for the environment, whose beauty—like that of our pieces—evolves with the passing of time.

a modular system where everything fits perfectly

Each model in this system fits into a **12-centimeter grid**, making all the pieces compatible with each other. This offers several advantages:

1. Flexibility in compositions: Select the combination of pieces that best fits your project or create custom walls by mixing different models.

2. Maintenance and versatility: Any module can be independently removed and replaced.

3. Accessory integration: Accessories in this collection can be incorporated into the system regardless of the model used.

pizarra with 8mm grouting

TECHNICAL INFORMATION

málaga

All our screen blocks are handcrafted and finished by hand, which may result in slight dimensional tolerances between pieces, especially among blocks in different colours.

In addition, each piece may present subtle tonal variations, resulting from the unique characteristics of each clay body and the firing process.

vélez

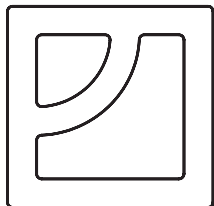

Like the Vélez tile collection, this model designed by Leblume is also inspired by the handcrafted heritage of traditional terracotta from the Axarquía and by the semicircular arch. Their design makes it possible to create organic patterns through the arrangement and rotation of each piece, allowing structured or fluid compositions to emerge from a single element.

Designed by Carlos Jiménez and Damián López (Leblume)

ojén

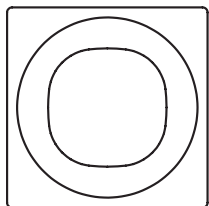

Designed by Jorge Herrera Studio, this 12×12 piece is unique in both composition and form. Its circular hollow widens as it approaches the outer face of the block, creating a gradient effect that softens the shadow and filters the light passing through it.

made for the eye, and for the touch

All our breeze blocks are finished with our exclusive Antique texture, a controlled aging process that wears down and softens the surface. The resulting pieces, with their silky touch and subtle tonal variations, evoke the essence of traditional terracotta.

Lattices

planter

The planters in this collection evoke the Mediterranean tradition of combining terracotta and greenery to create fresh, vibrant, and healthy spaces. When integrated into the blocks system, they enhance the overall thermal comfort of the composition.

Services and specifications

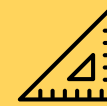

Production time

Artisanal lattices require between **50 and 70 days** of production from the date the order is confirmed. This period may be shortened or extended depending on weather conditions that affect the material's drying time.

Order confirmation

An initial payment of 50% of the quoted amount is required by bank transfer, with the remaining 50% due upon delivery. For international deliveries, 100% of the amount must be paid before the order leaves the workshop.

Technical Office

Our team of advisors and technicians will guide you through the solutions best suited to your project.

ISO Certification

We are ISO 9001 certified, a standard designed to improve customer trust and satisfaction, foster a proactive culture of prevention, improvement, and environmental protection, and ensure the quality of our products and services.
